

In this experiment, you will learn to control your own brain activity.

Feedback will be provided about your brain activity in the form of a green feedback circle.

Your goal is to make the feedback circle as large as possible.

You will receive a bonus payment of up to \$30 in each session depending on how large you can make the feedback circle.

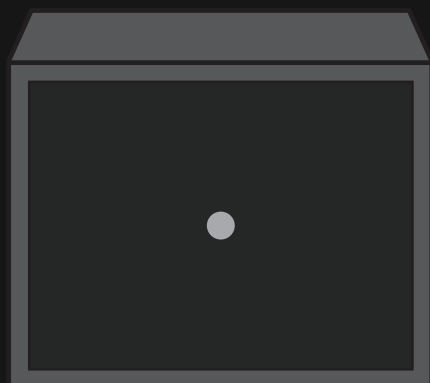

This payment is in addition to hourly compensation for being in the MRI scanner.

When the experiment begins you will see a grey dot in the middle of the screen.

Each trial begins when the dot turns green. While the dot is green, try any strategy you like to regulate your brain activity.

The dot will then turn grey while we calculate your feedback score for that trial.

Once we calculate your score, the green feedback circle will appear.

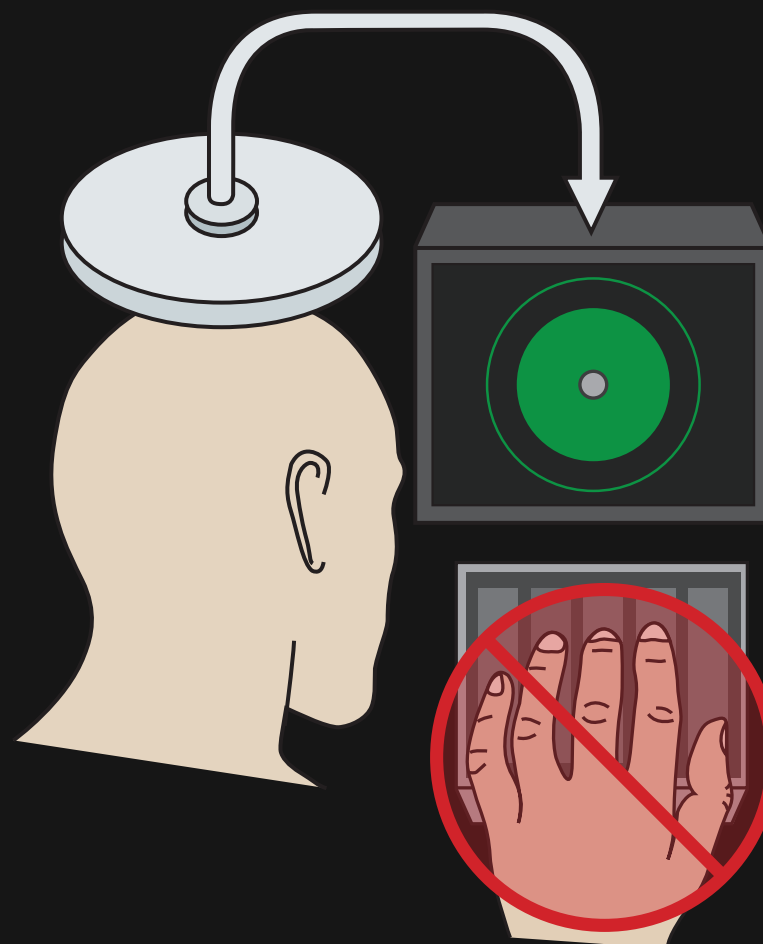

Each trial, try to adjust your strategy to maximize the size of the feedback circle.

Please remember what strategies you use, as we will ask you what strategies you used at the end of each session.

You will receive a response box to indicate when you are ready to proceed to the next stage of the experiment.

Please do not press the response box during feedback trials.
